

KOKUYO

INSPIRE

PAVING THE FUTURE.

The chair directly addresses the growing trend toward multi-device working and free address seating. To this end, a new mechanism posture support seat was designed to eliminate anti-forward leaning postures. The forward tilt support function allows the user to adjust the angle to align the torso and thigh for a well-balance posture position.

INSPIRE

We inspire INSPINE, the first lumbar support chair that uses wire.
Designed by KOKUYO in-house designer, Kazutaka Oki,
INSPINE heralds the launch of an industry first – wire lumbar support technology.

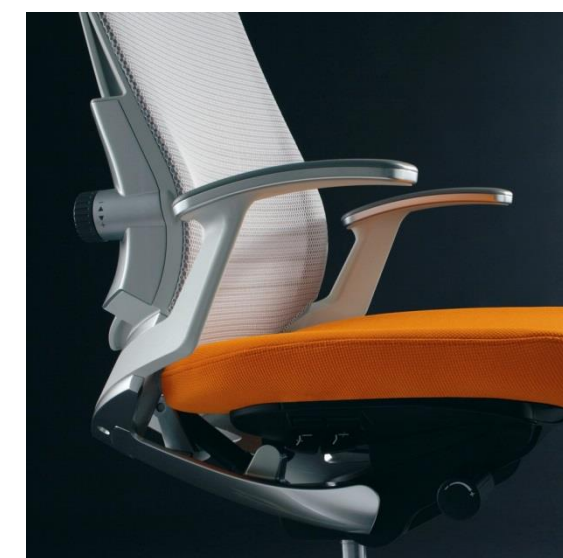

FIRST WIRE LUMBAR SUPPORT TECHNOLOGY

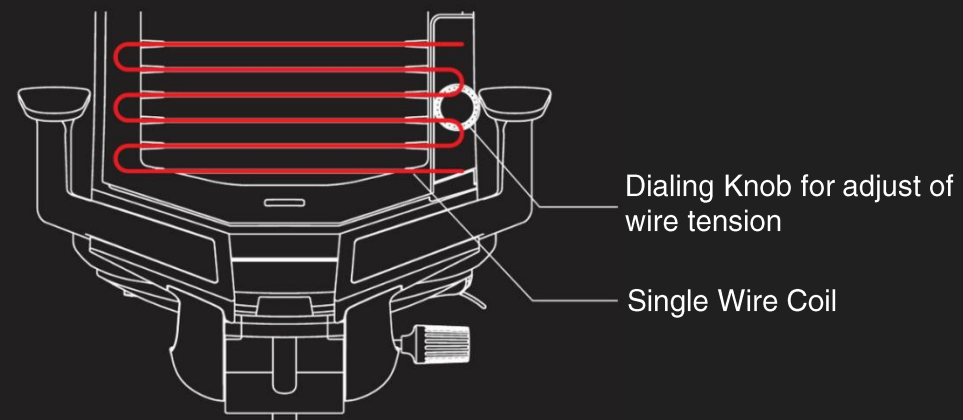

CUTTING EDGE DESIGN

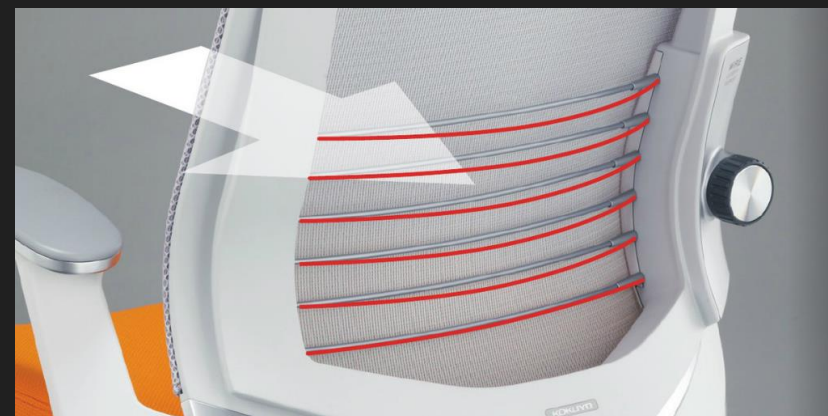

The key component of that functionality is the use of wire. The singular-coiled wire technology takes the idea of customization to the next level, offering the user far more precise support, unparalleled within the industry.

WIRE LUMBAR SUPPORT

By turning the knob to clockwise direction to increase the tension of the wire, thus provide a firmer support at the Lumbar area.

The red lines indicate the wire is not tension.

The red lines shown when the wire is tension.

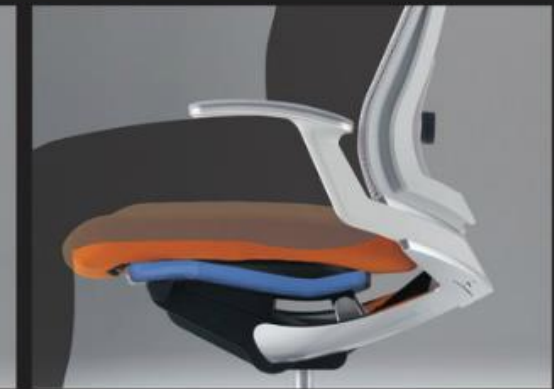

SEAT PAN SUPPORT

The seat pan can be decline to support the pelvis weight.

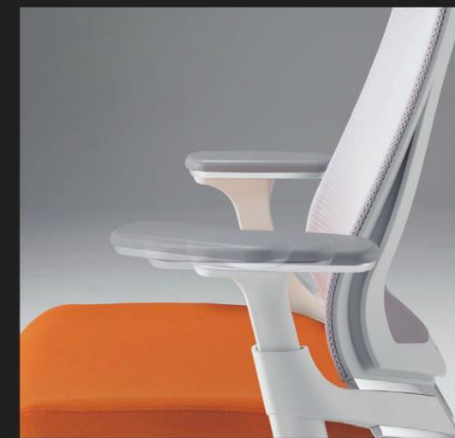

3 degree angle of declination

Underneath seat cushion to reinforce better sitting posture.

ARMREST

Armrest rest pad can be slide back for better support when typing.

Specifications

White Frame

CR-GA2515
High-back with headrest
and Adjustable Armrest

CR-GA2505
High-back with headrest
and Fixed Armrest
